## Position Indicator Interface Typ REG-FI 'B3'

## Function

The REG-FI position indicator interface converts a standard 0/4-20 mA output current of a tap-changer into a BCD code. The tap position is indicated on the built-in display.

A power supply unit delivers the supply voltages for the display, the measuring transducer and the relays.

The entering current is connected with a couple of lines to the measurement input. A current Id change (Idelta) generates the next step message.

A binary output transmits the information to the voltage control system REGSys.
For further use the BCD code is provided by 6 relay contacts and 6 current outputs.

- The tap position can be read on a large LED display
- Up to 38 uniform current tap-change positions are converted into a BCD code
- The cable between the tap-changer and the REG-FI can be up to 100 m (maximum)
- Relay contacts with AC $250 \mathrm{~V} 2 \mathrm{~A}, \mathrm{DC} 220 \mathrm{~V} 150 \mathrm{~W}$
- Large auxiliary voltage range of the power supply

## Technical specifications

## Regulations and standards

IEC1010, IEC801-1 to 6, VDE0110, VDE0160
Interference immunity EN50082-2
Emitted interference EN50081-2, EN55011

## Mechanical data

Construction

Connector
Degree of protection
Weight
Mounting
Panel mounted housing DIN43700
$144 \times 72 \times 210 \mathrm{~mm}$ (WxHxD) material UV94V-1
2 pieces; 'F1': 10pol; 'F2': 16pol IP40
inclusive 2 connectors $<1.2 \mathrm{~kg}$
within cutout $138 \times 69 \mathrm{~mm}, 2$ clips

## Input

DC current $\quad 0 / 4 \mathrm{~mA} \ldots 20 \mathrm{~mA}$
Current tap change Id $0.25 \ldots 2.5 \mathrm{~mA}$ same current stage
Tap-change positions
Input resistance $R_{E} \quad<25 \mathrm{mV} /$ Id
Tolerance of current tap-change pos. Id
$<2 \%$ of specified value
Superimposed alternating current at input $<0.1 \mathrm{~mA}$ ( 50 Hz sinus)

## Output

Binary output BCD 1 ... BCD 20/sign- to the BCD input (50V) of the REG-D; reference BCD GND
Voltage at 10 kOhm
Voltage output U+
ON (1) $\geq 10$ V DC
OFF (0) $\leq 5 \mathrm{~V}$ DC
15 V DC $\pm 10 \%$; reference GND; Internal resistance $1.2 \mathrm{k} \Omega$
Relays with one N/O contact for output:
BCD Codes 1..20/sign- contact closed (1) / open (0)
Potential isolation auxiliary voltage and relays contacts from each other and all other circuits
Contact load
AC 250 V 2 A, DC 220 V 150 W
Number of switching operations $<10^{5}$
Voltage output U+ 15 V DC $\pm 10 \%$; reference GND; Internal resistance $1 \mathrm{k} \Omega$

## Response characteristics

The requested conversion - current into BCD message of REGFI - must be specified with the order. This will be fixed internally and cannot be changed afterwards: Output code at start, input current 0 mA respectively 4 mA and output code at full scale at 20 mA .

The negative measurement input (Id-) is connected to the internal earth GND I of REG-FI. If the current transducer is not isolated from earth, this will result in a ground loop. To prevent this, open the external wire bridge at socket connector F2, pin 14-15.

## Safety

Safety class / overvoltage category

Test voltage
Measurement input, BCD-output
Auxiliary voltage

AC 2.3 kV
to auxiliary voltage to relay contacts to relay contacts

## Power supply

Galvanically Feature H1 AC 100 ... 240 V / DC $100 \ldots 353 \mathrm{~V}$ isolated Feature $\mathrm{H} 2 \mathrm{AC} 20 \ldots 60 \mathrm{~V} / \mathrm{DC} 20 \ldots 72 \mathrm{~V}$
Power consumption $<6$ VA / 6 WH H1; 1 A/T H2; 2 A/T
Temperature Operation
$0 \ldots+55^{\circ} \mathrm{C}$
Storage, transport
$-25 \ldots+75^{\circ} \mathrm{C}$

Other signals can also be assigned to the tap-change positions. Please include the requested code table with the order.
Example 28xld taps with offset (sign-), BCD code -12 ... -1/-0/1/... 15; out of range: -19 feature: „Y2 Example 28xld taps with offset (sign-), BCD code -9 ... -1 / -0 / 1 / ... 18; out of range: -19 out of range: 39

The device is available for standard current transducers $0 \ldots 20 \mathrm{~mA}$ or $4 \ldots 20 \mathrm{~mA}$. It is also available without display as a 19" plugin module 8T 3H (feature B1) or wall mount case (feature B2).

Alternative assemblies for binary output codes, AWZ, Gray-code or tap-change resistances are available in different implementations, with or without display.

Application REG-FI B3
panel case
Isolated transducer - output
(bridge „Id-" ↔, $G N D$ l"
same current steps ld

In the case of a large distance between the REG-FI and the current transducer, the maximum cable length depends more on the interference influences of parallel cables than on the maximum output voltage of the transducer. A superimposed AC ripple higher than $0.1 \mathrm{~mA} A C$ is not allowed at the REG-FI input. As each application has different earthing and voltage conditions, the only general statement that can be made is that longer lines are possible for the case that the parallel cables are shielded and have a larger distance to the REG-FI cable.
