Product discontinuation: Current Injection CI until 30.06.2023

Dear ladies and gentlemen,

Product changes, but also product discontinuations, mainly serve to continuously improve products or stabilize the product group with regard to hardware, firmware and related software.

1) Concerning Product

The Current Injectin CI (article numbers: 100.2005.xxx) is currently planned for product discontinuation.

2) Reason for discontinuation

The Current Injectin CI has reached the end of its technical product life cycle and will therefore be removed from the product range at the above-mentioned time.

3) Available function-identical replacement devices

- Current Injection MCI (Multi-Frequency-Current-Injection)
- Current Injectin CIF (classical modular 2-frequency current injection)
- Current Injection HPCI (incl. pulse pattern option for pulse location)

4) Existing devices in the field

- The agreed warranty period will be fulfilled in any case.
- The product support for devices in the field will remain as usual.
- Repairs of the mentioned devices are carried out until 30.06.2028.

After this time, you would receive an offer for a replacement device with identical function (see point 3).

- 1) Please forward this product information to your employees, colleagues and, if applicable, to your costumers.
- 2) Please excuse the inconvenience that may be associated with the discontinuation. We will do our best to make this action as smooth as possible and without affecting delivery times.

If you have any questions, please contact your first contact person directly.

With kind regards,

Thomas Smolka
